- Length: 194 cm (overall dimensions including the frame) 190 cm (padded top)
- Width: 68 cm
- Height: 78 cm
- Weight: 70 kg
- Capacity: 200 kg

DESCRIPTION

Very solid structure in an innovative design that makes this product very comfortable and performing. It can be defined as a multi-functional device as, by tilting back the central cushion, the structure can also be used as a chair for medical examination. Painted with grey epoxy powder. The top surface is placed on a solid peri-metral frame and is covered in washable and flame retardant class 1 IM coated fabric (synthetic leather/vinyl). High density padding. The cushions are reclinable by a rack system. The structure is equipped with a paper roll holder support. The foam leg holders are adjustable and movable in all directions and are available both in the anatomical and the standard version (specify when ordering). The couch is equipped with a removable rectangular stainless steel container placed under the seat. For increased stability the bed is equipped with adjustable feet. Very simple and quick assembly.
