

KN-7000L

Photodynamic therapy

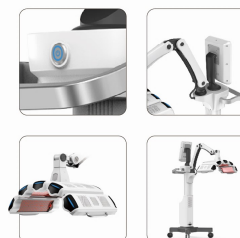

- ◎Trichromatic light source
- ◎Dose working mode
- ◎High power SMD

Combinations of light sources

Function introduction

- High power SMD LED light source, 3D simulation matrix arrangement, higher intensity, more uniform light spot
- Various combination of light source, meeting diversified clinical needs.
- Multi light source custom cycle irradiation mode, one-key to complete the system treatment
- Free telescopic cantilever system, the light source can stay at any position and angle
- AI intelligent temperature control system ensures treatment safe
- Built-in infrared distance measuring function, ensure the treatment effect
- Pre-stored 5 treatment plans, one-key selection, making the operation more convenient
- Real time intensity detection function
- Continuous irradiation mode and pulse irradiation mode available, meeting different clinical needs
- Double safety protection of button switch and power-on password

490mm×470mm×1370mm (L×W×H)
