

Technical Specifications

Wavelength	415/530/560/590/640/690/755 nm
Light Source	Split(Intense)Pulsed Light(Xenon Lamp)
Fluence	1-32J/Cm2
Spot Size	14.3 x 42.6 mm
Pulse Sequence	Single / Double / TriplePulses / SHR / Dynamic Stamp mode
Pulse Duration	0.2-15 ms
Pulse Delay	1.0-90 ms
Repetition Rate	1,3,5,10Hz (Per second)
Light Conduction	Quartz / Sapphire Coupling
Cooling	Up to 5°C (adjustable)
Electrical Requirements	220v/16A, 50/60Hz
Weight	60kg

ESTHER

Intense Pulsed Light (IPL)

ESTHER

ESTHER is upgraded from the existing IPL model using our independent technology for innovative.

The better Photo rejuvenation & Hair removal treatment and more compact design.

ESTHER represents the latest version of skin care equipment, which is built with the innovation technology of IDS Ltd.

For safe and easy operation, the company has refined its technology and conducted clinical tests for many years.

ESTHER is suitable for treatment procedures for pigmented lesions, vascular lesions, acne and hair removal using basic wavelengths of 415nm, 560nm and 640nm. It can be also used for treatment of dark skin rejuvenation and hair removal by shifting to optional wavelengths of 640nm, 695nm and 755nm (ALEX Light). Wavelength selection simply involves detaching and attaching the handpiece.

Fast Treatment / The interval between each shot is shorter than that of the previous versions, and this makes the treatment easier and faster.

Verified Parameters / By smart protocols proper wavelength can be selected easily. The set parameters are optimized based on many clinical experiments to deliver maximal effects and safety.

Advantages & Stronger Points Comparing to Other Devices

White toning (415nm)

- Low depth of penetration (0.05~0.1mm) / High absorption (Melanin & Hemoglobin)
- Safety (Fractional Concept IPL) / Excellent efficacy for faintly pigmented lesions
- Fractional type is our patent

Less side effects by heat (Fractional safety zone)

Combine Rejuvenation (415nm+560nm) > Amazing result in skin toning

Acne treatment

Fast hair removal (SHR)

ALEX (755nm) for hair removal (Best in the world)

Technical Features

Maximal safety is achieved by Lattice technology based on fractional concepts. Lattice Optimal benefits of Lattice are provided by cutting edge technology.

- Rotating technology-based on IPL
ESTHER allows easy choice of a wavelength range desired by using a rotator mounted in the hand piece. Selection of Wavelengths is easy without replacing the filter or the hand piece. (Patent No. 10-2004-0012778)
- Stable energy supply
A steady energy supply, which is achieved by technological expertise, allows safe operation of this beauty equipment and maximizes effects of treatment effects for each skin type.
- Cooling system can be controlled
Semiconductor-based cooling system of ESTHER can be controlled via the monitor, and maintains a steady temperature once it is set. This cooling system is aimed for minimizing pain of the patient and side effects.

Before and After
